BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

ABSTRACTED-PUB-NO: DE 29513950U

BASIC-ABSTRACT:

The gear controller (1) is integrated with the housing of the gear transmission and is provided with electrohydraulic actuators (3) for actuating switching elements of the transmission, as well as with a circuit board (5) carrying

electronic and electrical components (6) for driving the actuators. $\mbox{\mbox{\sc A}}$

base-plate (2) is designed as a carrier plate for at least one part of the electrohydraulic actuators.

The circuit board is made of a heat resistive material and forms, together with

the components arranged on it, an electronic module (4), fixed on the base

plate. A temp. sensor (8) and pref. a pressure sensor are mounted on the

electronic module. The circuit board may be formed of ceramic foil, and the

pressure sensor may be used to measure the oil pressure within the transmission.

USE/ADVANTAGE - In EGS (BMW). Provides unified design of module which can be

delivered to vehicle manufacturer for installation into vehicle in situ.

Reduces assembly work load. Eliminates need for separate housing and extra

wiring. Enables improved functionality and transmission switching.
